

HORROCKS PROJECT DASHBOARD

Horrocks Information Technology

Built on the highly configurable Microsoft SharePoint online platform, Project Dashboards are web-based and updated in real time. As a result, the most up-to-date information, such as project schedules, documents, budgets, and staff specifics, is available to all team members anytime from any device. In addition, users can track project risks, innovations, and decisions as well as organize tasks and links to pertinent sites. Each Project Dashboard is developed in-house and customized specifically to the needs of each project.

Horrocks has nearly a decade of experience setting up and managing Project Dashboards for a variety of projects in multiple states, including a range of project delivery types with construction budgets from \$10,000 to over \$100 million. As a result, project managers implementing Project Dashboards have realized reduced costs and increased client satisfaction.

Implement Horrocks' Project Dashboards to:

- Share, organize, and track information easily in a one-stop location
- Coordinate and communicate efficiently
- Coauthor documents in real time with a comprehensive version history
- Work efficiently with the intuitive and user-friendly interface (no download required)
- Maintain full confidentiality with access controlled and securely monitored 24/7 by our security operations partner
- Access information faster with a no-barrier, single-link sign-on for approved team members, both internal and external
- Receive setup assistance and ongoing support throughout the project
- Provide insightful state-of-the-art project management and delivery
